SUMMARY

Software Engineer with 3+ years building distributed, high-throughput systems and production LLM applications. At Whatfix, owned end-to-end design of an AI-powered self-healing pipeline (Java, Spring Boot, Kafka, Redis, Cassandra) integrating Claude vision models spanning systems design, prompt engineering, agentic orchestration, and observability. Seeking SDE / AI Engineer roles building reliable, intelligent products at scale.

SKILLS

Languages: Java, Python, JavaScript / TypeScript, SQL

LLM & Agentic: Claude, Gemini / Vertex AI, Prompt Engineering, RAG, Agentic Workflows, LangGraph, LangChain, MCP, n8n, Tool Orchestration

Backend, Frontend & Distributed: Spring Boot, Node.js, REST APIs, React.js, Next.js, Apache Kafka, Redis, Apache Cassandra, Docker, AWS

ML & Observability: PyTorch, TensorFlow, HuggingFace Transformers, OpenTelemetry, Future AGI

Databases: MongoDB, ClickHouse, Neo4j, PostgreSQL

EXPERIENCE

Whatfix — Software Engineer II Nov 2025 – Present

Bangalore, India

Java · Spring Boot · Kafka · Redis · Cassandra · Claude · Gemini · OpenTelemetry · Future AGI

- **AI self-healing pipeline:** Designed and shipped Whatfix's Vision Healing pipeline end-to-end on a 3-person team, integrating Claude vision models to automatically recover broken UI elements from screenshots — eliminating manual selector maintenance for enterprise customers.
- **Two-phase architecture:** Evolved healing into visual screenshot matching plus a structured selector-generation phase, giving downstream consumers multiple fallback strategies.
- **Anti-hallucination prompt engineering:** Authored a multi-selector prompt with explicit grounding constraints eliminating two classes of model hallucination, plus a validation phase rejecting unrelated screenshots.
- **Kafka batch & reliability:** Built a Kafka-driven batch healing endpoint (multiple flow items per call) and eliminated multi-pod race conditions with a Redis-backed atomic processing guard, preventing duplicate LLM calls across pods.
- **Cost & observability:** Cut LLM token spend via prompt caching and a Cassandra-backed no-match threshold; added OpenTelemetry / Future AGI span tracing (model, tokens, latency, full prompt/response) for end-to-end cost and latency visibility.
- **Customer escalations:** Technical point of contact on live enterprise calls; diagnosed and resolved complex healing failures across traces, Cassandra state, and Redis cache.

Guardstar — Ex-Founder · SDE – AI Dec 2024 – Nov 2025

Southampton, UK

Node.js · MongoDB · React · LangChain · MCP · RAG · Docker · AWS

- **End-to-end ownership:** Solely drove the product from PRD and architecture through implementation, deployment, and production operations — an AI food-safety platform featured in the Daily Echo.
- Built an agentic HACCP compliance generator (LangChain + MCP) with RAG retrieval over compliance regulations, reducing manual preparation time by 40%.
- Architected a fault-tolerant full-stack platform (Node.js, MongoDB, AWS EC2, Docker) serving 5,000+ concurrent users at p95 < 120 ms; optimised the sensor event-processing pipeline (concurrent queues + caching), cutting latency 43% (70→40 ms).

Infineon Technologies — Business Analyst Jul 2022 – Aug 2024

Bangalore, India

SAP BW/4HANA · ABAP · Tableau · SQL · Python

- Led in-house migration to BW/4HANA without third-party assistance (saving ~€300K/year); built ABAP big-data transformations and reporting pipelines with Tableau Prep, SQL, and Python.

PROJECTS

Persistent Click-Element Tracker with Context Graph — JavaScript · Python · Neo4j · Puppeteer

- Engineered a hybrid in-browser neural net + Python backend (vector search + Neo4j graph) to re-identify clicked DOM elements in < 50 ms at 90% accuracy, improved to 92% via automated Puppeteer retraining.
- Built a queryable DOM context graph and re-identification service as an agent-ready tool layer an LLM agent can call to ground actions in a live DOM.

EDUCATION

University of Southampton, UK Sep 2024 – 2025

MSc Computer Science · ECS Scholarship

Vishwakarma University, Pune Jul 2019 – May 2023

BTech Computer Science & Engineering · CGPA 9.3 / 10

Certifications:

Harvard Business School (Business Analytics)

[Featured in Daily Echo for AI app work](#)
